About me

Product Manager with 3+ years of end-to-end product ownership specializing in onboarding, activation, and monetization across Web, iOS, and Android for a subscription-based platform, backed by 5+ years in growth and performance marketing.

Currently at Skoove, I lead commercial product strategy – translating complex business goals into structured definitions for freemium, trial, and subscription journeys. As a dedicated advocate for users, I combine an Agile mindset with Continuous Discovery to ship impactful features quickly.

I leverage AI daily to accelerate user research synthesis, PRD drafting, automate the workflow and experiment analysis, and drive data-backed prioritization alongside cross-functional Engineering, Design, and Marketing teams.

Core strengths

- ❖ End-to-end product management + product ownership combo:
product discovery → delivery → iteration, across web and mobile platforms
- ❖ Deep experience with international SaaS products, localization (>8 languages), and platform-specific constraints (iOS / Android / Web)
- ❖ Experimentation & data-driven prioritization – A/B testing, funnel analysis, KPI/OKR definition (activation, conversion, engagement, LTV, retention)
- ❖ Product ownership in detail: technical requirements definition, grooming & refinement, stakeholder-to-engineering translation, backlog ownership and prioritization, user story refinement
- ❖ Cross-functional collaboration: Engineering, Design, Marketing, Analytics, and external/commercial partners
- ❖ Third-party & partner integration — translating commercial partner requirements into technical delivery (API contracts, subscription logic, billing flows)
- ❖ Agile-mindset (agile frameworks: Scrum / Kanban / and even Scrumban setups)
- ❖ Strong in analytics: Mixpanel, Amplitude, GA4
- ❖ Expert-level performance marketing background

Experience

SKOOVE – PRODUCT OWNER (WEB + IOS + ANDROID) - BERLIN, 2023-PRESENT

- ❖ Owned onboarding and monetization flows across Web and App for a subscription-based SaaS platform operating internationally.
- ❖ Revamped new-user experience and made it way more personal by rethinking the entry and onboarding flows across Web and App. Now Skoove feels more personalized and relevant for new piano learners
- ❖ Commercial experiments and growth initiatives consistently led to +15–20% YoY revenue growth, driven by both new customer acquisition & renewed subscription revenue.
- ❖ +50% trial starts and +31% registration-to-trial conversion through iterative A/B testing.
- ❖ +18% CLV through pricing and paywall experiments.
- ❖ Led partner integration for a new co-branded product: translated commercial requirements into technical specs, managed cross-org stakeholder alignment, and coordinated delivery across engineering and UX teams

- ❖ Translated business and marketing requirements into backend- and frontend-ready development tasks; worked closely with backend developers to define APIs, event tracking, and subscription logic.
- ❖ Prioritized roadmap based on user value & business impact, feasibility & technical constraints, balancing commercial goals with Skoove's pedagogic mission to ensure monetization felt like a natural extension of the learning experience
- ❖ Ensured delivery quality through detailed acceptance criteria and close QA collaboration
- ❖ Subscription & billing: deep setup of subscription infrastructure: RevenueCat <> App Store Connect + Google Play Console + Stripe.
- ❖ Web funnel optimization at scale: localization across 8 languages, performance tuning per acquisition channel

SKOOVE – PERFORMANCE MARKETING MANAGER (MOBILE USER ACQUISITION) - BERLIN, 2022-2023

- ❖ Built performance marketing from zero: all-around campaign management, bidding, and optimization in the pre-AI era: hardcore hands-on work.
- ❖ Set up and managed paid acquisition across Meta Ads (Facebook, Instagram), Google Ads (Search, Display, YouTube), Apple Search Ads, and TikTok Ads – cross-platform campaigns (Web, iOS, Android) spanning US, UK, Western & Eastern Europe, and Asia (Japan, Korea) across 8 locales.
- ❖ Capital-efficient test-and-learn phase: scaled monthly ad spend from €0 to €40k; reduced CAC by 80% from initial cold-start to optimized steady-state, achieving profitable paid acquisition with positive ROAS.
- ❖ Led end-to-end tracking implementation with the engineering team: ad account architecture, Google Tag Manager, Google Analytics (GA4), AppsFlyer for mobile attribution, Facebook Conversions API, and iOS SKAdNetwork (SKAN) setup – navigating Apple and Google's evolving privacy restrictions (Ah!).
- ❖ Collaborated with affiliates, influencers, and Youtubers to produce performance creatives – video ads, user testimonials, and UGC-style assets for top-of-funnel campaigns.
- ❖ Built cohorted LTV analysis and CAC reporting from scratch using manual spreadsheet modeling, giving the Marketing Director and CEO their first clear view of unit economics per acquisition channel. CSV-driven, VLOOKUP-heavy performance analysis.
- ❖ Managed ASO strategy using AppTweak, optimizing app store presence alongside paid acquisition to maximize organic discovery and Apple Search Ads.
- ❖ Onboarded a CRM manager and launched targeted seasonal campaigns that drove +20% YoY increase in new customer subscription revenue.
- ❖ Identified critical funnel drop-off points and channel entry friction as the true growth constraint, and advocated for product-first investment over incremental ad spend. Was promoted to the Product Owner role to own the commercial solutions to the acquisition bottlenecks I had diagnosed.

Earlier Experience

SENIOR PERFORMANCE MARKETING MANAGER AT BONIFY - BERLIN, 2021-2022

SENIOR USER ACQUISITION MANAGER AT ALIRADAR - SAINT PETERSBURG, 2019-2021

ADVERTISING ACCOUNT MANAGER AT YANDEX – SAINT PETERSBURG, 2016-2019

Education

Tomsk State University of Control Systems and Radioelectronics

Master's Degree — Electrical, Electronics and Communications Engineering – 2009 – 2015

Tools & Platforms

- ❖ Product: Jira (incl. workflow config), Confluence, Miro, Figma, Gamma
- ❖ AI-assisted discovery & Workflow automation: Claude/GPT (advance prompt engineering for PRD drafting, rapid prototyping, user research synthesis, SQL query generation)
- ❖ Data, Analytics & Experimentation: Mixpanel, Amplitude, Firebase, SQL (advanced querying via AI assistance), Claude for automated experiment log analysis
- ❖ Subscription & Payments: Stripe, RevenueCat, Adapty, App Store Connect, Google Play Console, Purchasely
- ❖ Technical literacy: API understanding, SQL (data extraction & synthesis), tracking schema logic
